1. INTRODUCTION

This bibliographic search was prepared by BRIDGE for the Danish Ministry of Foreign Affairs (DANIDA). The bibliography is intended as background information for a Nepal Gender Profile focused on the sectors; education; environment and natural resource management; energy; decentralisation; and legal status.

The databases searched included the British Library of Development Studies; CAB Abstracts; Academic Index; Sociological Abstracts; Econlit; Geobase; PAIS; IntelEc; UNBIS; and Participatory Rural Appraisal (PRA) materials at the Institute of Development Studies (IDS).

This bibliography was compiled by Zoë Oxaal for BRIDGE at IDS. Sally Baden provided advice. This bibliographic search aims to be comprehensive of recent literature on the sectors specified but is not exhaustive. It covers materials which could be identified within the time frame allowed. The entries are ordered under headings as listed in the table of contents. The entries vary in both content and format due to the different sources searched. Some abstracts are provided in cases where they were readily available. The bibliography includes unpublished literature from women's organisations as well as published sources. For sectors in which scant literature directly addressing the topic was found, references likely to cover relevant issues have been included. Section 8 is comprised of other references collected in the course of the search, but does not attempt to be comprehensive in its coverage.

A study is presented of Nepal and the social, economic and environmental

impact of the growing tourist industry. The history of the Kingdom is described together with the changing political system. Different sections examine: the agricultural economy; the role of women in society; health provision in remote rural areas; Nepal's relationship with its neighbours; and environmental problems (including the development of community forestry). The final section considers the involvement of an NGO, Oxfam in Nepal.

Women and community forestry in Nepal: expectations and realities.

PERSONAL AUTHOR: Tinker,-I.

SOURCE: Society-and-Natural-Resources. 1994. 7(4), pp 367-381.

AB: Community forestry programs in Nepal, based on the erroneous assumption that farming families are the major cause of deforestation, ignore other critical causes. Recent emphasis on the inclusion of women in these programs, based on the recognition of women's subsistence activities and understanding of nature, minimizes fundamental constraints embedded in Nepalese society. A review of community forestry programs funded by international agencies and nongovernmental organizations indicates increasing participation of both women and men at the community level. Exaggerated expectations of the potential of community forestry in solving Nepal's ecological crisis could undermine the fragile gains of Nepali women. -

Implementation of the results of scientific research in practical management: a case study from Nepalese forestry.

PERSONAL AUTHOR: Griffin,-D.-M.

SOURCE: Mountain-Research-and-Development. 1991. 11(3), pp 195-201.

AB: This paper discusses the experiences of the Nepal-Australia Forestry Project from 1978 until 1988. The research, aimed at improving the productivity of the forests, was developed in response to the expressed needs of the local people, although there were no qualitative nor quantitative data on forest use. Changes were introduced at the panchayat level by local initiatives. A series of questions were discussed concerning available land, species to be planted, forest protection, and other topics that arose during the course of the project. Examples of this action research are described together with changes in community and private forest species and management practices that result from the direct participation of local mountain communities. It is noted, however, that user groups tend to be dominated by men and by those of higher caste and higher economic status, whereas it is the women and the poor who depend on the forests for fuelwood and fodder products; changes may be needed to ensure sustainable utilization of forests and a reasonable equity in the distribution of benefits.

TI: Whose? Trees: a people's view of forestry aid

AU: Anon-,

SO: (Panos Publications, London), 1991, 143pp, 9maps.

AB: Funded by the aid agency FINNIDA, this book explores how far three different projects succeeded in involving local people and in meeting their real needs. It examines past mistakes and provides a fresh perspective - that of men and women at village-level - on what sustainable forestry must entail if it is to succeed. Focusing on Sudan, Nepal, and Tanzania, it addresses the question of how to balance environmental, social and economic sustainability.

TI: Migration: a strategy for survival in the mountains.

AU:Thacker,-P.

SO: Appropriate-Technology. 1991. 17(4), pp26-28.

AB: Migration has always existed at high altitudes in Nepal, usually among single, able-bodied men, but in recent times environmental degradation of the hills has led to an influx of female migrants into Kathmandu. Describes the effects on and within the carpet industry which mainly employs women and female children and concludes that some form of employment generation for rural women must be found if this valuable resource is not to be drained completely away from the hills. -C.Wilson

Women, poverty and resources.

PERSONAL AUTHOR: Wignaraja, -P.

SOURCE: (Sage, New Delhi), 1990, 241 pp, index.

AB: Over the past decade, both women's movements and national policy-makers in South Asia and elsewhere have begun to recognise the crucial inter-linkage between gender and equity in poverty alleviation and sustainable development. The author surveys the work of a number of grassroots women's organisations in Bangladesh, Nepal, India and Pakistan, as also related processes in Africa and Latin America. Based on this field experience, he outlines the alternative approach for alleviating the poverty which afflicts both rural and urban women. He argues that the solution lies in collective action by women's groups using primarily local resources and knowledge. In order for these processes to be replicated on a larger scale, they may require the support of sensitive NGOs, banks, government agencies and donors. -from Publisher

Training for farmers and forest committee members.

Fisher, K. J.

Rural Development Centre, Pokhara, Nepal.

Banko Janakari vol. 3 (1): p.3-7

Publication Year: 1991

Language: English

Document Type: Journal article

In response to the need for greater participation by villagers in the community forestry programme of Nepal, a forestry training initiative has been established by the United Mission to Nepal (UMN). This article explains the importance of the courses, and describes their contents and methods. The primary objective of the courses is to motivate the participants by helping them to analyse their present situation and to see what possibilities exist to improve it. Courses last from 6 to 10 days and are designed for 2 different groups. There is a course for farmers which emphasizes the management of privately owned resources, and one for committee members that considers the management of community resources. There is, however, considerable overlap in the material. Occasional courses are also provided for basic development workers and motivation staff. These are designed to assist them in the work of encouraging farmers and committee members who have attended the training courses. One-week courses are also available to enable farmers to set up and run a small private nursery close to their home. It is emphasized that courses will be successful only if they are seen as a part of the activities of a project or local organization. Participants will need ongoing support to implement any resulting activities; hence a follow-up visit to the home of each of the trainees is made later in the year by one of the training staff. Ways of enabling more women to participate are being considered. 6

Document Type: Journal article

Forest destruction is a threat to environmental stability and the equitable economic development of people in developing countries. This is particularly true in the Himalayan region, where rural people spend a large proportion of their time collecting scarce forest resources. The efforts of the government and forestry officials to increase forest resources are insufficient and inefficient. However, studies have shown that in spite of tenure problems and lack of policy support, rural people in the Himalayan region have planted, protected and managed forest resources on their own land and community land. Current knowledge about these local initiatives is insufficient to make appropriate policy changes. This paper emphasizes the need to study the nature, scope and policy implications of rural people's initiatives to plant, protect and sustainably use trees on their own land and on community land in the Himalayan region, particularly in Nepal. 40 ref.

Publisher: Finnish International Development Agency (FINNIDA)
Helsinki, Finland

Language: English

Document Type: Miscellaneous

A review of gender aspects in 8 FINNIDA forestry projects (in Tanzania, Zanzibar, Kenya, Nepal, SADC countries, Senegal, and Central America) was undertaken in 1992, and country profiles for 7 countries (Kenya, Nicaragua, Zambia, Senegal, Nepal, Tanzania and Zanzibar) prepared at the same time. This paper is one of the results of the review, and supports the Rapid Gender Analysis (RGA) procedure developed by FINNIDA to give guidance to personnel during project preparation, design and implementation, while expanding it to include institution building and policy level projects in addition to field level projects. After an introduction, the paper is in 4 parts: The framework; When is gender an issue?; The project cycle and gender analysis; and The woman question. 55 ref.

Document Type: Conference paper; Book chapter

This paper highlights the gender roles in agroforestry management and the impact of women on the tree planting programme conducted by the Pakhribas Agricultural Centre (a multidisciplinary semigovernmental organization with the main objective of developing agricultural and rural situations in eastern Nepal). Data were gathered through formal survey, participatory rural appraisal (PRA), and rapid rural appraisal (RRA). Results indicated strong interaction among the agroforestry components, ie, crops, trees, and livestock. It was found that women worked for 12 hours 49 minutes per day, while men worked eight hours five minutes. The analysis of labour-use patterns for agroforestry activities revealed significant differences in the involvement of women as compared with that of men. Preference criteria for tree species were also different by gender. Overall, women are more involved than men in agroforestry production and management activities. The tree planting programme conducted by the Pakhribas Agricultural centre has brought about some changes including changes in livestock population, livestock management, availability of bedding material and some fodder, and also the division of labour. With the household changed from a free-grazing livestock system to stall feeding, the women find they have more work, as the children who once took care of the livestock now attend school. 7 ref.

Document Type: Conference paper; Journal article

Most development specialists recognize that women play a vital role in

forest resource management. However, involving women who are illiterate or semi-literate and overburdened with farm and household work in forest management activities is a challenge. In general, rural women lack basic information about new activities, and what information they receive is filtered through their fathers, brothers, husbands and sons. Because most community forestry training is directed towards literate people and conducted at district level, women are usually deprived of opportunities for training. This paper reports on how the Nepal-Australia Community Forestry Project (NACFP) started conveying development messages while implementing training at the village level. One such training programme started with the building of smokeless stoves (chulo) out of locally available materials, as a means of reducing fuel consumption and associated women's labour. The process of communicating the community forestry message to women during the stove training programme is described. The need to identify and act on the needs of women is emphasized, and a methodology for involving women in community forestry is outlined. 2 ref.

Publisher: Overseas Development Administration London, UK

ISBN: 0-90-2500-49-X

Language: English

Document Type: Conference paper

In traditional cultures throughout the world, the burden of domestic water collection falls on women. Participatory hygiene education for women can improve domestic sanitation and increase hygienic use of domestic water, but for fully effective and efficient use of community water supplies, women need to be involved in water supply management from at least the design stage of the supply. A case study of the UK/Nepal Eastern Region Water Supplies Project (ESWSP) demonstrates the value of water consumer involvement in projects at the earliest possible stage. It is suggested that early participation of all the consumers in water supply schemes will result in more effective use of available water, less pilfering of materials, improved construction, more appropriately sited standpipes with consequent increased utilization and maintenance of pipelines.

Language: English
Document Type: Journal article
A short summary of a report prepared for USAID, Kathmandu, analysing the major issues relating to women's participation in community forestry in Nepal. The importance of women in forest utilization activities (collecting fuelwood, fodder, leaf compost and bedding, and controlling grazing) and in nurseries and tree planting is emphasized, and the advantages and benefits of their participation on forestry committees (both mixed and all-female) and in extension work with women discussed. In the latter context, the promotion of women into forestry jobs (as rangers, nursery naikes and forest watchers) is urged as a means of bringing more women into forestry management.

13 fig., 27 tab., OQEH

Language: English

Document Type: Miscellaneous

The hill areas of Nepal are a prime example of an area in which low productivity agriculture is surrounded by rapid environmental degradation as the result of deforestation. The study is based on results from a survey of 120 households in three hill districts of the Western Development Region, conducted in 1982/83 jointly with the Agricultural Projects Services Centre of Nepal and the FAO. Results indicate that when deforestation, represented by the time required to collect a standard load of firewood, increased by 1.0% there was a reduction in fuelwood consumption of 0.3% and an increase in the total time required for its collection of 0.6%. Assuming a similar response for other essential forest products, the collection time for fuelwood, leaf fodder, and grass alone required an additional 1.13 hours per day by women in the high deforestation sites in the sample. The effects of this on the amount of labour available for agriculture indicate that women's farm labour would decrease by 1.4 hours per person per day, a decrease not compensated for by an increase in wage labour or by men's labour, which may also decrease. In addition to the effects of deforestation on agricultural production and incomes, secondary or associated effects could be related to fuel consumption and time spent on food preparation. The main determinants of preschool child nutrition are degree of deforestation, household income, household size, and work loads of women and older children. The results suggest that it is not enough to rely on out-migration or reforestation efforts alone to improve the economy and ecology of the region. Strategies for raising agricultural productivity need to be considered.

Multipurpose tree species in rice-based farming systems in Chitwan, Nepal: a gender analysis approach.

Timsina, D.; Timsina, J.; Joshi, N. N.; Ghimire, D. P.; Thapa, F.

NGO Federation of Nepal, P.O. Box 7768, Kathmandu, Nepal.

Journal for Farming Systems Research-Extension vol. 6 (1): p.13-26

Publication Year: 1996

ISSN: 1051-6786

Language: English

Document Type: Journal article

Gender analysis has been identified as a useful tool in the diagnostic phase of farming systems research. The tool was used for identifying the gender (men and women) roles in terms of labour contribution in household, farm and animal production, and fuelwood and fodder collection in two distinct communities (indigenous Tharus and non-indigenous Brahmins and Chhetries) of Chitwan, Nepal where integrated rice-based farming systems are practiced. Results showed that women participated equally or sometimes even more than men in different rice farming and livestock production activities. Women were exclusively involved in fuelwood and fodder collection from the nearby forest. Brahmin and Chhetry farmers were raising large animals such as cattle and buffaloes, whereas the indigenous Tharu farmers were raising small animals such as goats. Because of such differences in the preferences of animals, women of the two communities chose different multipurpose tree species for on-farm testing in the project. Children's contribution was also noteworthy in both communities. Results suggest that gender analysis can be an appropriate tool in identifying gender roles and technology options for rice farming systems where agriculture, livestock and forestry are integrated and interrelated components of the systems. 17 ref.

Document Type: Miscellaneous

This report analyses gender-specific patterns of forest- and tree-use practices in South and South East Asia using data gathered from 26 communities in 6 countries (Bangladesh, Indonesia, Nepal, Philippines, Sri Lanka, and Thailand). The analysis concentrates primarily on 2 patterns: (1) behaviour of men and women engaged as collectors of forest and tree products; and (2) utilizing sources of products. Information pertaining to these aspects was taken from a data set compiled by the Regional Study on Farm- and Village-Forestry Practices. The wide sources of the data enabled examination of broad regional patterns, as well as country- and community-specific features. Cross tabulations showed patterns of distribution of men and women as collectors among the categories of products, sharing collection tasks for individual products, and utilizing sources.

Document Type: Journal article

Nepal is one of the world's poorest countries and has one of the world's lowest literacy rates (26% in 1985). This paper draws on seven evaluations conducted under the National Literacy Programme in Nepal between 1986 and 1990. These are: (1) Women's Social Service Coordinating Committee (1986-87); (2) World Education Project (1989); (3) Ministry of Education pilot effort (1988-89); (4) Production Credit for Rural Women's Programme, UNICEF (1989-90); (5) Small Farmer Development Project, UNICEF (1989-90); (6) Primary Education Project, UNICEF (1989-90); and (7) Save the Children study (1988). These evaluations, which are reviewed, and from which inferences are drawn, focus on five adult literacy programmes and two out-of-school child programmes. Though different institutions managed the implementation of the programmes all used the same materials and instruction design and were extensively field tested and revised. They

therefore constitute a good source of data with which to examine the following issues: drop-out rates, female participation, language of instruction, skill acquisition, skill retention, changes in attitude and knowledge, effects on the primary schools and costs. This synthesis questions some commonly held beliefs but also reinforces common sense ideas. It is clear that good instructional design and materials as well as training inputs in literacy teachers are good investments. It recommends systematic research and monitoring to provide sound advice in using limited resources to meet the goal of universal literacy, whilst building a system that will provide universal access to quality primary schools.

Women in higher education; progress, constraints and promising initiatives
AU:Subbarao,-K.; Raney,-I.; Dundar,-H.; Haworth,-J.
SO: World Bank Discussion Papers. 1994.244, 81pp
AB: Two issues are examined in this paper. First, how did women fare in the wake of the general expansion of tertiary enrollments? Second, what programs and policies contributed to enhancing women's enrollment in the context of World Bank project experience? Part I shows that despite the potential of women's higher education up to economic growth, a 'gender gap' in enrollments at the tertiary level is pervasive, especially in sub-Saharan Africa, the Middle East, and South Asia. In Part II, the policies that were explicitly tried to increase women's access are examined with reference to the World Bank's project experience from 1972-92. In terms of broad patterns across countries, the reviewed evidence suggests that countries with low per capita income levels and difficult social setting (e.g. India, Pakistan, Nepal, Bangladesh and many countries in sub-Saharan Africa), may have the greatest barriers to female participation. In such situations, a promising approach is the introduction of multiple components in the projects to overcome an array of social and economic barriers which inhibit female participation in higher education. By contrast, in low income countries with less severe social constraints, expansion of places has been generally successful. However even in these countries, establishing a link between the programs offered and the opportunities for women in the labour market was found to be critical. -from Authors

Community health workers in Nepal.

PERSONAL AUTHOR: McConnell,-C.; Taylor,-M.

ED: Frankel,-S.

SOURCE: in: The community health worker. (Oxford University Press), 1992, pp 102-
124.

AB: Following a series of reviews in the 1980s a new programme for training Community
Health Volunteers was implemented in 1988. In contrast to past efforts, this programme
focuses on the training of rural village women with the aim of addressing maternal and child
health. Given the extended scope of the new programme it is important to examine the
successes and failures of past attempts, so what lessons learnt can be applied to the training
and support of what will amount to the largest work-force in Nepal's health care system. This
chapter describes the way in which CHW programmes in Nepal have developed. It considers
the problems that have been encountered, describes the way in which these have been tackled,
and considers the way in which international health policies and donor priorities have shaped
the development of these programmes. -from Authors

Hinduism, tribalism and the position of women: the problem of Newar identity.
PERSONAL AUTHOR: Gellner,-D.-N.
SOURCE: Man. 1991. 26(1), pp 105-125.
AB: A dichotomous Hindu v tribal or caste v tribe model is frequently used to analyze the relationship between dominant and peripheral groups in South Asia. Using data from the Newars of Nepal, it is argued that this model reflects indigenous stereotypes, especially concerning the position of women. Historical data and contemporary practice show that the oft-cited freedom of Newar women to divorce and remarry without stigma probably only ever applied to low castes and outlying villages. The mock marriage of Newar girls to a god, while a ritual adaptation to the norms of Brahmanism, does not prevent a Newar woman from experiencing widowhood. A trichotomous model, the components of which are briefly sketched, is proposed that is better able to capture the complexity of current ethnographic fact and of its possible historical antecedents. -Author

Joint production and consumption in traditional households: fuelwood and
crop residues in two districts in Nepal.
Amacher, G. S.; Hyde, W. F.; Joshee, B. R.
Journal of Development Studies vol. 30 (1): p.206-225
Publication Year: 1993

Document Type: Journal article

Forest conversion by agricultural households is the leading cause of deforestation. Little is known about agricultural household use of forest and tree products. This paper examines household production of and demand for fuelwood and fuel substitutes in two districts of Nepal. Women play a larger role in collection in the district dependent on production from common forest lands while men and agricultural capital are more important inputs in the district dependant on production from private lands. Demand elasticities for fuelwood, combustible agricultural residues and improved stoves are also measured, each by household income group. All price and income demand elasticities are less than one. Residues are more important substitutes for low income households and improved stoves are more important substitutes for high income households. Consumption evidence shows that both fuelwood and combustible crop residues tend to be inferior goods. There are favourable implications for Nepal's environment as household incomes grow, with more households converting from residues to fuelwood, eventually growing their own fuelwood. Meanwhile, non-agricultural households will convert to substitute fuels and fuel technologies. This suggests that forestry development activities will be most important for Nepal now, in the period before development proceeds far, and before traditional demands on the forest environment change. 14 ref.

Forestry has become an important issue in economic development. It is primarily women and children who collect fuelwood for domestic consumption in developing countries. Therefore, forestry activities that increase the availability of fuelwood and development projects that promote improved stoves both release women's labour from fuel collection and permit its use in other productive activities, and improve the agricultural environment by permitting crop residues to be better used for enriching depleted soil. This paper assesses this argument, using an analysis of survey data for traditional households from two districts in the east-central hills of Nepal, Sindhupalchok and Kavreplanchok. The analysis begins with a utility maximizing household model which includes various labour and capital inputs, and allows jointness in the household production and consumption decisions involving fuelwood, food crops, and combustible residues. Empirical estimates of the model for each district are used to examine the following hypotheses: (i) community forests are a crucial source of fuelwood; (ii) women and children are the crucial collectors of fuelwood; and (iii) agricultural residues and improved stoves are substitutes for fuelwood in consumption. 9 ref.

Document Type: Journal article

Despite the alarming decrease of forest, almost 90% of cooking fuel energy in the hill regions of Nepal still comes from wood. In the last several years fuel efficient cooking wood stoves (new stoves) have been designed and distributed to reduce the pressure on forest resources of Nepal. Many households who received new stoves have not been using them. This study examines the effect of individual, socio-cultural and technological factors on the level of use of new stoves among Brahmin and Chhetri households in the villages of central Nepal. Factors studied include perceived relative advantage, perceived cultural compatibility, and perceived complexity of new stoves, social support for adoption of new stoves, attitudes towards technology and innovations in general, knowledge about use and maintenance of improved stoves and demographic characteristics of new stove recipients and their level of adoption of new stoves. A total of 100 new stove receivers were interviewed, of whom 48 were not using their new stoves. The determining factors explain 71% of variance in the level of use of new stoves.

Document Type: Journal article

The acute energy crisis facing Pakistan today, calls for an increase in

the awareness of the problem among all consumers in the country. This paper evaluates the awareness about energy conservation among rural people, in an effort to promote more efficient utilization of energy resources. The various sources of energy available in Pakistan are first mentioned with appropriate statistical evidence. The fact that conservation and national use are basically behavioural considerations has to be addressed by raising education, motivation and welfare levels within the rural population. Effective participation in the conservation strategy is presently limited by inadequate incentives to reduce energy consumption, the absence of appropriate infrastructural arrangements and limited access to women, among other factors. The role of non-governmental organizations (NGOs) in reaching target groups and providing them with strategies for community development is crucial to the success of the conservation strategy. In conclusion, a Plan of Action is presented for implementation at the district level in Pakistan, by means of pilot projects. 7 ref.

Document Type: Conference paper

India is beset with three big problems: (1) lack of sanitation facilities; (2) shortage of fertilizer and irrigation facilities; and (3) shortage of fuel. These are interrelated in several ways. This paper describes the work of the Sulabh Shauchalaya Sansthan (registered as a society in 1970) and its crusade against the dry bucket privy and the manual scavenging and carrying system. The society has passed through four major phases of development, expansion and diversification: Phase I: Sulabh Shauchalaya for the household; Phase II: Sulabh public conveniences; Phase III harnessing bioenergy from Sulabh public conveniences; Phase IV: concerted R & D and training programmes. These are discussed separately and in detail. Latterly, to make the programme more directly relevant to women, Sulabh International has started the Women's Welfare Wing, working in six villages in Bihar.

Will women be marginalized in development work? The experiences of rural projects in Nepal.

OT: Werden Frauen durch Entwicklungsarbeit marginalisiert? Erfahrungen aus ländlichen Entwicklungsprojekten in Nepal.

PERSONAL AUTHOR: Bajrasherya,-S.; Schwank,-O.

SOURCE: Geographica-Helvetica. 1994. 49(1), pp 19-26.

AB: Considers the unintended marginalisation of women in development work through a case study of the Palpa District development project (1987-88), which aimed to improve living conditions in a hilly region. Instead of assuming that benefits will 'trickle down' from men to women, gender aspects must be incorporated into projects at the earliest planning stages. -

European Journal of Agricultural Education and Extension vol. 3 (2):
p.63-74

Publication Year: 1996

Language: English

Document Type: Journal article

A study was conducted to explore communication patterns of male and female farmers in the hills of Nepal. Using a roster of names of respondents, a sociometric survey was employed to collect data on communication relations and information exposure from 243 females and 179 males. The study showed that males have horizontal communication among themselves while females are active seekers of information and have both horizontal as well as heterogeneous communication patterns. These differential communication patterns are significant for extension interventions as extension workers would be able to facilitate rapid flow of information through appropriate members of the networks as local channels in the community. Extension organizations would also be able to redesign extension strategies and methods to reach women farmers effectively while groups could be formed along network membership. This may require training of extension workers with regard to interpersonal communication processes and a network approach to diffusion of innovations. 28 ref.

Document Type: Miscellaneous

A study is presented of the causes of failure of farmer groups in Nepal. Conducted during 1992/93 three categories of groups were identified based on the problems observed in each group, and were termed: Highly Problematic Groups (HPG), Partial Problematic Groups (PPG) and Less Problematic Groups (LPG). The study surveyed 36 groups from the Dhankuta district, with in-depth interviews with three male, and three female groups (one from each of the three categories of groups). The results of the study also included an analysis of gender. Results indicate that groups with greater than average land holdings show a better effect on group development. Development of functional groups was also encouraged when group members come from similar areas, altitudes, socioeconomic status, and were in close physical proximity. Recommendations are presented to encourage the development of functional groups. 13 ref.

Motherhood and subsistence work: the Tamang of rural Nepal.

PERSONAL AUTHOR: Panter-Brick,-C.

SOURCE: Human-Ecology. 1989. 17(2), pp 205-228.

AB: Minute-by-minute observation of individual women over the period of a year provides a reliable and valuable description of their daily activities. The extent to which Nepalese rural women vary their subsistence responsibilities during pregnancy and lactation is examined by comparing mothers with a non-childbearing sample. The remarkable behavioral similarity between the two groups of women when workloads are high is explained by reference to childcare practices and labor constraints prevailing in the community. -Author

Opening the box: intrahousehold food allocation in rural Nepal.

PERSONAL AUTHOR: Gittelsohn,-J.

SOURCE: Social-Science-and-Medicine. 1991. 33(10), pp 1141-1154.

AB: The study examined intrahousehold food behaviour in six villages in a rural hill area of mid-western Nepal. Qualitative and quantitative methodologies taken from both anthropology and nutritional sciences were used to collect data on food belief systems, household allocation of food resources, and the effect of these features on diet and anthropometric status in a sample of 767 individuals in 115 households. Background data were also collected on socioeconomic status and demographic variables such as education levels, occupation, and migration patterns. The results document a variety of mechanisms by which some individuals are favored over others through household food distribution, including serving order, serving method, refusing to serve foods, channeling foods and substituting low status foods for high status foods. No differences were observed in mechanisms of food distribution or nutrient intake between male and female children, but adult women were less likely to meet their nutrient requirements for energy, beta-carotene, riboflavin, and vitamin C than men of the same age. -from Author

Female headed households in the eastern hills of Nepal: characteristics and their decision making pattern.

Lama, N. G.; Sherpa, N. G.; Sherpa, L. T.

Pakhribas Agricultural Centre, Dhankuta District, Koshi Zone, Nepal.

PAC Working Paper - Pakhribas Agricultural Centre (No. 131): 21 pp.

Publication Year: 1996

ISSN: 1021-5034

Publisher: Kathmandu, Nepal

Language: English

Document Type: Miscellaneous

A study is presented to identify the socioeconomic characteristics and the decision making patterns of female-headed households, with data from 212 female-headed households in Ranibas, Mamling and Barbote Village Development Committees, Nepal. Ten per cent of the total households in the eastern hills were headed by a woman, and 95% of these had occurred through the death of the husband, or the divorce or partition of the family due to conflict. Illiteracy, a lack of resources (including a lack of food security), small family size with inactive labour force and a complete dependency on farming were the main characteristics. Decision making was influenced more by the presence or absence of active family members below the household head rather than the lack of a male household head. 9 ref.

Community context, women's natal kin ties, and demand for children:

macro-micro linkages in social demography

Axinn, William G

Fricke, Tom

Rural Sociology (Rural Sociol) v. 61 (Summer '96) p. 249-71

DOCUMENT TYPE: Feature Article ISSN: 0036-0112

ABSTRACT: A study was conducted to investigate whether multiple levels of context might simultaneously direct individual-level strategies by examining the relationship between women's natal kin ties and their demand for children, an area in which context is thought to be important. A combination of ethnographic and survey data from two Nepali communities of the Tamang ethnic group, the Timling and Sangila, was used to measure contextual characteristics, women's ties to their natal families, and couples' fertility preferences and behavior. Findings indicated that particularly supportive relationships with natal kin have more influence on fertility preferences and behavior than does contact with natal kin, although both factors are important. In addition, even within the same cultural context, radically different community environments can produce opposite consequences of ties to natal kin.

Can licensed drug sellers contribute to safe motherhood? A survey of the

treatment of pregnancy-related anaemia in Nepal

Kafle, Kumud K

Madden, Jeanne M; Shrestha, Ananda D

Social Science & Medicine (Soc Sci Med) v. 42 no11 (June '96) p. 1577-88

DOCUMENT TYPE: Feature Article ISSN: 0277-9536

ABSTRACT: Iron-deficiency anaemia is a major cause of maternal mortality worldwide, contributing to perhaps one in five maternal deaths. According to the World Health Organization (WHO), maternal anaemia is most severe in southern Asia. Drug retail shops frequently serve as the public's first point of contact for medical care, even though many drug sellers have no training in the treatment of illness. In western Nepal, drug retailer treatment of anaemia in pregnancy was investigated using interviews, focus groups and simulated clients ('surrogates'). Research assistants posing as the husbands of anaemic pregnant women asked retailers for advice. In 112 retail shops studied, 71 of the study surrogates were recommended iron supplements for purchase. Drug recommendations often included vitamins, minerals and other ingredients not therapeutic for pregnancy-related anaemia. Retailers were found to take little case history. Fifty-seven per cent of retailers asked about the duration of the pregnancy; 40 asked

no relevant questions. Advice about the drugs sold was infrequent and 59 of the surrogates received no advice of any kind other than a product recommendation. Knowledge of important referral criteria was also especially low. Although 66 of the retailers had some sort of formal training for work with pharmaceuticals, current training levels were not found to be associated with better knowledge or practice. A focused training intervention to improve retailer treatment of anaemia in pregnant women is recommended. Copyright 1996, Pergamon Press Ltd.
